Innovative engineering solutions

At Dawson Medical we specialise in the manufacture of precision engineered components and assemblies for the medical and healthcare sectors.

Understanding your markets

We understand the dynamics of the global marketplace and partner with customers to deliver innovative, value engineered solutions that meet ever more challenging legislative, technical and commercial demands.

Developing the right product

As one of the world's leading exponents of ISO approved precision cold forming and advanced machining and finishing, we have the knowledge, experience and resources to help you design, develop and manufacture unique product and component solutions.

Regulatory Compliance

We work with you to ensure that regulatory compliance, traceability and quality standards are met, and that production efficiencies are optimised, to help you bring your products to market as quickly, safely and cost effectively as possible.

ISO 9001

With full accreditation to ISO 9001, we offer guaranteed levels of quality control and full traceability at every stage of our operation, from initial planning to final delivery anywhere in the world.

Throughout, we follow the discipline of cGMP, with comprehensive documentation, reporting and analyses, designed to complement your specific business procedures.

Manufacturing Operations

Our manufacturing operation includes custom built dedicated cells and is supported by an extensive onsite QA laboratory, using the latest precision measuring systems and data analytical tools.

These enable us to ensure total compliance with industry standards and maintain continuous improvement processes, to enhance still further the quality, efficiency and value of the services we provide to your business.

Quality & Reliability

Our design, prototyping and manufacturing, backed by dedicated technical and commercial support, provide our customers around the world with a total service for the development, production and supply of precision engineered components and assemblies for use throughout the medical and healthcare sector.

Whatever your requirement, from high volume syringe components to small batches of parts for diagnostic and monitoring equipment, we can help you develop precision engineered solutions that enhance quality, reliability, functionality and performance.

Over 80 years of history

Dawson Medical is part of a small group of companies which can trace its roots back to the early nineteen thirties, offering engineering services to the automotive sector before becoming a supplier of critical parts for anti-lock braking systems on aircraft. Since then we've partnered with customers in almost every sector of industry, from automotive and motorsports, to aviation, power distribution, electronics and medical.

Today, we have the knowledge, skills and resources to engineer innovative solutions from one-off parts to high volume components and are acknowledged as a world leader in precision cold forming and engineering technologies.

We work with customers around the world, helping businesses like yours deliver real bottom line improvements in product and component performance, based on the realisation of technical, regulatory and commercial goals.
